

# Web3 Music Revolution

**A revolutionary, all-in-one, Web3 music platform! GIGCO applies smart contracts and NFTs to legacy music industry systems, empowering the entire music community. Musicians stay in control of their music content, live performances, and merchandise, nurturing their entire career in one place.**

## Our Mission

GIGCO seeks to provide more working opportunities for thousands of talented musicians no matter the size of Gig they like to play. Leveraging Web3 capabilities eliminates reliance on intermediaries and the value saved can distribute to the artists, venues and fans, resulting in a more profitable Gig economy.

GIGCO is a U.K limited company with headquarters in Newcastle upon Tyne. The main development office is in Laos P.D.R, with a further backend development team working out of the Philippines. Our team includes a collection of professional musicians, venue owners and event coordinators combined with the expert knowledge of full stack programmers who share a vision of more adaptable, fluid systems for all aspects of the live music industry.

## What Is \$GIG?

\$GIG is the platform's native token, acting like a digital voucher that can be exchanged for goods and services. 190 million \$GIG tokens have been minted on Solana blockchain which offers fast, secure, and highly scalable transaction of value. \$GIG allows for viable microtransactions which facilitate future app features. 950,000 tokens will become the initial liquid supply at TGE with the remaining supply releasing over a 36 month period in line with the vesting schedule.

## Our Arena

The app allows musicians, venues, and fans to connect directly. Venues can arrange Gigs, pay artists, advertise events, sell tickets, and reward regular attendees for continued support. Artists can also organize Gigs in the app, sell merchandise, and even offer fans fractionalised ownership of their music. Fans can use the app to find live music all around them, directly support their idols, write Gig reviews, stream music, and receive rewards for being superfans.

## Ecosystem

### GAMIFIED STAKING

Artist and Venue profiles include personalized staking options which gamify the process. You can earn better rewards by staking with the most active profiles you follow.

### GIG CONTRACTS

When an event is arranged on GIGCO a smart contract is instantly deployed. This protects both venue and artist for potential defaulters or bad actors.

### NON-FUNGIBLE SONGS NFS™

\$GIG token allows artists to mint music as an NFS™, then offer fractional ownership of songs to investor fans. They will share the royalties proportionately, which are paid directly to their \$GIG wallet.

### PAYMENT FLEXIBILITY

GIGCO offers payment flexibility; balances display in \$GIG and this is always the cheapest payment solution for customers. It is possible to settle in fiat currencies if customers choose. Algorithmic price feeds display balances in the customer's choice currency where required.

### NFT TICKETING

NFT ticketing helps combat scalping activities and allows artists to attach unique event memorabilia to the admittance. It also facilitates our Proof of Attendance concept, rewarding superfans with different artist and venue loyalty perks.

## Tokenomics

Initial Market Cap: \$142,500

Total Supply: 190,000,000

Initial Circulating Supply: 950,000

Public Sale Price: \$0.15
